

Your Prescription for Crystal Clear Water™

Deluxe Opening Kit Instructions

Follow these steps for a crystal clear swimming pool.

1. To Maintain proper water balance, it is beneficial to get in the habit of testing your pool water on a weekly basis. This kit includes 50 test strips to get through the entire swim season.
2. Add 1 quart of Rx Clear® Metal Out for every 15,000 gallons. This eliminates potential staining.
3. Test and adjust the alkalinity level. Follow dosage instructions on the Rx Clear® Swimming Pool Alkalinity Increaser to adjust your pool's alkalinity levels, as needed, to the 80-120 ppm range. The alkalinity must stay in range for your chlorine to work at its full potential and help control pH swings. The alkalinity level may drop when it rains, depending on where you live. If it does, raise the alkalinity level to the 80-120 ppm range.
4. Test and adjust pH to the 7.2-7.6 range. Follow the instructions on the Rx Clear® Swimming Pool pH plus Increaser or the Rx Clear® Swimming Pool pH minus to adjust your pool's pH level as needed. A correct pH maximizes chlorine efficiency and swimmer comfort.
5. Weekly, at night, shock the pool using Rx Clear® Super Shock 68%. The dosage depends on the amount of algae in the pool; **Clear pool dosage**, 1 bag per 10,000 gallons; **Slight algae dosage**, 3 bags per 10,000 gallons; **Severe algae dosage**, 5 bags per 10,000 gallons.
6. The morning after the shock treatment is the ideal time to add Rx Clear® Swimming Pool Algacide 60 plus. Add 10 oz. per 10,000 gallons. This helps the chlorine shock flood algae cells, and helps prevent future growth.
7. Day 2 evening, add 2 lbs of Rx Clear® Conditioner/Stabilizer per every 10,000 gallons; this bonds with the chlorine, preventing UV light from breaking down the chlorine. Pre-dissolve prior to use.
8. The water is usually cloudy after an algae break-out. Your kit also includes Rx Clear® Super Clarifier. Use 8 oz. of Clarifier for every 10,000 gallons any time you're not satisfied with the clarity of the water. This acts as a magnet for loose suspended particles. Dead algae is deposited in the filter.
9. Rx Clear® Multi Purpose Cleaner helps remove scum lines that can typically form at the top of the pool.
10. If you have any questions about this kit, call 1-800-356-3025 for further assistance.
