STEP 1

CLEAN OFF YOUR COVER

Cleaning off your cover will make removing it easier and will prevent damage.

	Drain your cover using a cover pump
	Clean off any solid debris
	Hose down and clean cover with an all purpose cleaner
	Let cover dry and store in a safe place

STEP 2

REMOVE ANY PLUGS

Unplug any pipes and other areas so your pool can function properly.

STEP 3

REASSEMBLE EVERYTHING

You will need to reassemble anything that you took apart during fall closing. Some of these items are:

Filter	Skimmer Basket
Pump	Diving Board
Heater	Slide
Hoses	Ladder
Pressure Gauge	Steps

STEP 4

ADD WATER TO YOUR POOL

You will need to raise your pool's water back up to your desired level. You can easily do this with a garden hose.

STEP 5

TURN ON EQUIPMENT

After everything is assembled and water has been added, you can start to turn things back on. Make sure you test everything to see if it's running properly.

STEP 6

CLEAN REMAINING DEBRIS

After running your filter for a bit, use a vacuum, automatic cleaner, brush or leaf rake to clean any remaining debris.

STEP 7

TESTING YOUR POOL WATER

Use a test kit to check the quality of your pool water and see what you will need to add to balance it.

STEP 8

ADJUST CHEMICAL LEVELS

After testing your pool, adjust your chemicals until your water's chemistry is balanced. We recommend using an Rx Clear® Pool Opening Chemical Kit. It has everything you need to open your pool.
